#### Citations and explanations

Reference is made to the following document:

D1: US-A-6 104 334 (ALLPORT DAVID E) 15 August 2000 (2000-08-15).

The claimed subject matter relates to a method for requesting and receiving content lists formed by selecting contents that come under a specified filtering criterion, as well as to apparatuses connected to a domestic network.

The prior art documents do not suggest the claimed subject matter. Document D1 discloses only the downloading of content lists from the Internet, which lists are to be stored in a remote control (see column 8, lines 45-57).

It follows that the technical features proposed are not obvious from the prior art and the subject matter claimed in the present application (claims 1-9) is considered to involve an inventive step.

The claimed subject matter relates to electronic devices that are industrially manufactured and is, as a result, industrially applicable.
